Software Architect | Full-Stack Leader | AI Systems Specialist

Profile Snapshot

Software Architect with 14+ years of experience designing and scaling high-performance distributed systems. Proven track record of leading cross-functional teams, modernizing legacy monoliths, and delivering complex, data-intensive applications.

Key Areas of Expertise

- **Full-Stack Expertise:** Deep specialization in Ruby on Rails, RSpec, Supabase, TypeScript, React, and modern frontend frameworks.
- **Cloud-Native Architecture:** Proficient in architecting scalable solutions on AWS (ECS, Lambda, S3).
- **Leadership & Strategy:** Extensive experience mentoring teams, streamlining CI/CD pipelines, and driving technical modernization.
- **AI Engineering:** Specialized in building agentic systems using OpenAI and Anthropic APIs.

Technical Skills

Languages & Frameworks:	Ruby on Rails, RSpec, Supabase, TypeScript, Node.js, Next.js, JavaScript, React, React Native, AngularJS, HTML5, CSS3, jQuery
Databases & Search:	PostgreSQL, MongoDB, MySQL, Elasticsearch, OpenSearch
Cloud & Infrastructure:	AWS (ECS, S3, Lambda, CloudFront with custom domain handling), Vercel (Next.js deployment), Docker, Supabase, CircleCI, GitHub Actions (for CI/CD automation), GIT
Core Competencies:	Software Architecture, System Design, Data Structures, Google Maps API, AI-Assisted Development (Claude Code, Cursor, Antigravity), OpenAI & Anthropic API

Work Experience

Independent Software Architect & Freelance Consultant | Self-Employed **Apr 2024 – Present**

Provided freelance software architecture, system modernization, and quantitative systems engineering for US-based technology clients and proprietary fintech platforms.

Client: QodexAI / Anvitae Inc (US) — Freelance Software Architect (Contract) **Dec 2024 – Jun 2026**

- **AI & Cloud Architecture:** Architected core agentic AI engines leveraging OpenAI and Anthropic APIs; engineered containerized AWS ECS cloud architecture to host backends with high availability.
- **Product Engineering (OutxAI):** Architected OutxAI, an intelligence and scraping tool built with Supabase, TypeScript, PostgreSQL, and React, automated via AWS Amplify.
- **Distributed Scheduling:** Designed scalable scheduling infrastructure supporting multi-scenario build groupings, job queuing, and flexible cron-frequency execution.

Client: Building Intelligence (US, via Toptal) — Freelance Senior Rails Consultant (Contract) **Apr 2024 – Dec 2025**

- **Core Modernization:** Spearheaded technical modernization and version upgrades for a monolithic enterprise physical-security platform, migrating legacy systems across major Ruby, Rails, and Mongoid (MongoDB) versions.
- **Search Infrastructure:** Modernized search architecture by migrating the platform to OpenSearch, significantly improving query performance and indexing for large-scale security data.
- **Scheduling & Ingestion Pipelines:** Refactored core scheduling engines to eliminate bottlenecks and optimize resource allocation; built high-throughput data-import pipelines for bulk multi-tenant entity ingestion and validation.

Proprietary Project: AlgoTrading — Automated Equity Trading Platform
Live Platform: **https://algo-trading-frontend.algo-trading.workers.dev/**

- **Edge & Serverless Stack:** Architected a single-page trading application using React, TypeScript, and Vite deployed globally on Cloudflare Workers edge, with a decoupled, strongly typed API client layer.
- **Execution Engine & Idempotency:** Engineered a real-time, event-driven quantitative engine using Deno and PostgreSQL pg_cron, leveraging distributed advisory locks to enforce absolute idempotency and eliminate order race conditions.
- **Risk Controls & Sweeps:** Designed quantitative risk mitigation controls including automated End-of-Day order sweeping, exchange tick-size quantization, circuit-band error caching, and global circuit-breaker mechanisms.
- **Cloud Infrastructure & Headless Auth:** Provisioned GCP Compute Engine infrastructure with dedicated static-IP proxies and Playwright headless browser workers for automated multi-factor authentication (TOTP) to broker APIs.

Lead Software Engineer | W Energy Software **Oct 2022 – Mar 2024**

- Architected and optimized core financial modules responsible for high-volume automated ledger balancing, invoice reconciliation, and payment matching.
- Engineered dynamic currency conversion infrastructure, ensuring accurate, multi-tenant global transactions compliant with shifting forex rates.
- Designed scalable billing algorithms that automated complex payment-to-invoice workflows, eliminating manual auditing errors.

Senior Backend Engineer | HealthTap **Oct 2018 – Oct 2022**

- Engineered backend systems using Ruby on Rails to architect heavy data-import systems optimized to parse, validate, and securely process high-volume, complex client medical data files from enterprise partners.
- Optimized asynchronous background workers by customizing process lifecycle hooks to execute multi-threaded background tasks, maximizing resource utilization.
- Designed multi-tenant client affiliation engines and complex event-tracking systems to scale affiliate partnership workflows and attribution pipelines.
- Automated code delivery pipelines by designing custom CI/CD backmerge workflows leveraging automation scripts and platform APIs.

Sr. Product Engineer | Alma Connect **Dec 2012 – Oct 2018**

- Designed and open-sourced a reusable database utility gem to handle complex field denormalization across active relational associations, optimizing query performance.
- Architected multi-tenant marketing campaign infrastructure, engineering modular target audience filters and granular performance reporting modules.
- Integrated secure transaction and payment processing gateways (ATOM and RazorPay) to manage high-volume event ticketing and donation workflows.
- Developed and deployed the cross-platform React Native mobile application, maintaining feature parity with the core desktop platform.

Software Engineer | Navyug Infosolutions Pvt. Ltd. **Jun 2011 – Dec 2012**

- Developed and maintained dynamic web applications utilizing Ruby on Rails, focusing on clean code practices and efficient feature implementation.
- Conducted comprehensive server-side data analysis using database query optimization techniques to improve application performance.

Education

Indian Institute of Technology (IIT) Guwahati **2011 | GPA: 7.35/10.0**

Bachelor of Technology in Engineering Physics
