Javascript  
jQuery  
HTML5  
CSS3  
Data Structures  
Google Maps API  
aws lambda

aws s3  
aws ecs  
CircleCI  
GIT  
Github Actions  
Docker  
Supabase

## Work Experience

Qodex.ai, Remote  
Technical Architect

Since May 2024

**Product:** Qodex.ai

**Description:** Qodex.ai provides a platform for API Automation testing. The product is a web platform where developer/QA from the client team can set up the api automation suite and schedule them to run based on frequency they select. Backend architecture uses Ruby on Rails, postgres and frontend uses ReactJS.

- Developing RESTful APIs to facilitate communication between the frontend and backend systems.
- Worked on automated deployment setups using docker, ecs and github actions.
- Worked on public pages for seo indexing using dynamic seo metatags using aws lambda and s3 and cloudfront for public app.
- Created a setup to define dynamic javascript function from UI and use them while writing api test cases and worked with ExecJS on backend to execute javascripts functions and variables.

W Energy Software (SevenLakes Technologies), Remote  
Lead Software Engineer

Oct 2022 - March 2024

**Product:** W Energy ERP Software

**Description:** W Energy Software provides oil and gas SAAS ERP software to oil & gas companies to empower the energy value chain. W Energy Software accelerates business performance, boosts operational efficiency, and drives down costs with an ERP solution built for the cloud.

- Collaborating with the team of 5 members to design and develop the ERP software using Ruby on Rails.
- Taking a lead role in the development of the backend functionality using Ruby on Rails framework.
- Writing clean and maintainable code following best practices and coding standards.
- Collaborating with the frontend developers to integrate the backend functionality with the user interface.
- Writing and executing unit tests to ensure the reliability and stability of the software.
- Participating in daily stand-up meetings to discuss progress, challenges, and potential solutions.
- Troubleshooting and resolving issues reported by users, providing timely support and bug fixes.
- Worked on maintaining the deployment infrastructure on aws and monitored the performance of services running on aws on a daily basis.

HealthTap India Pvt Ltd, Gurgaon  
Senior Backend Engineer

Nov 2018 - Oct 2022

**Product:** HealthTap

**Description:** HealthTap is a nationwide virtual primary care practice that delivers affordable, quality care equitably to all Americans. HealthTap provides its members access to a long-term primary care doctor of their choice that will help them manage all aspects of their healthcare in a holistic and personalized way based on a trusted relationship.

- Implemented github backmerge of branches using GITHUB ACTIONS and GITHUB REST APIs.
- Implemented email tracking mechanism in a very generic way to track open and click rate.
- Customized delayed\_job gem using its lifecycle hooks to run multiple threads in a single delayed job task.
- Worked on affiliation model with affiliate clients and events tracking for affiliates.
- Worked on handling/processing/importing complex data files received from enterprise clients.
- Developing RESTful APIs to facilitate communication between the frontend and backend systems.

AlmaConnect Solutions Pvt. Ltd, Gurgaon  
Senior Product Engineer

Dec 2012 - Oct 2018

**Product:** AlmaConnect

**Description:** Almaconnect helps people connect with their school / college / organization's alumni network. The alums can sign up on the platform and interact with other people in the network. They can create posts, share memories, and send private messages. The platform also provided admin roles to admin people so that they can have more control on the network.

**Website:** <https://www.almaconnect.com/>

**Sample Network:** <https://iitd.almaconnect.com/>

**Product:** Tradilio

**Description:** Tradilio helps people connect with other people who have the passion and knowledge of the stock market. The people can follow each other and see their trades if the follow request is accepted. The platform automatically reads the trade of a person from his/her gmail inbox and lists that in their feed. Automatic profit/loss calculation is also built in the product. Real time chat between the people is also implemented in order to provide a faster mode of discussion about the market.

**Website:** <http://tradilio.com/>

- Worked on web-app based on Ruby on Rails, MongoDB, Elasticsearch, AngularJS and also responsible for responsive and mobile friendly UI.
- Implemented image processing using aws-lambda with smartcrop and nodejs on the cloud.
- Written a highly reusable module as AcDenormalize for denormalization of fields from ruby association relationship and published a gem for the same as well.
- Integrated payment gateway with ATOM and RazorPay for payment against Events and DonationCampaign in AlmaConnect product.
- Designed marketing campaign architecture with audience filter and reporting.
- Worked with Google Messages API for reading out filtered emails and their password protected pdf to list down transactions for the trading app Tradilio
- Designed chat and messages architecture and implemented the same using pusher api for real time communications.
- Developed react native mobile app for Tradilio and AlmaConnect
- worked on docker scripts for building docker images for deploying application on aws ecs.

Navyug Infosolutions Pvt. Ltd, Noida  
Software Engineer

Oct 2011 - Dec 2012

- Develops web-app based on Ruby on rails and sproutcore using Aptana studio tool.
- Analysis of data on server side using database management in eclipse platform.
- Developed a rule engine using Drools rule engine for implementing schemes in a business.
